

STRESS RELAXATION

LD CONST STRAIN $\Rightarrow \dot{\epsilon} = 0$

$$0 = \frac{\sigma}{\mu} + \frac{\dot{\sigma}}{k} \Rightarrow \text{DIFFERENTIAL EQUATION}$$

$$\sigma = \sigma_0 e^{-\left(\frac{k t}{\mu}\right)} \quad \sigma = \sigma_0 @ t = 0$$

RECOVERY

LD REMOVE STRESS

ELASTIC STRAIN RECOVERS INSTANTLY

$$\Rightarrow \epsilon_e \rightarrow 0$$

NO further recovery.

$$\sigma = 0 \quad \dot{\sigma} = 0$$

$$\dot{\epsilon} = 0$$

ELASTIC RECOVERY =

$\frac{\sigma'}{k}$ ← STRESS in SYSTEM at MOMENT of ~~RELAXATION~~ LOAD REMOVAL
